

Hello, my name is Marco, and I'm a second year computer science student.
I'm here today to ask for your support to turn Smart Kitchen into reality.

Have you ever found yourself constantly busy, finding difficult to keep track of food items you own, often throwing them away or making unhealthy choices?

This contributes unhealthy lifestyles, and to increased food wastage, two huge global problems affecting millions.

According to a recent study, in 2022 alone, 1 billion tonnes of food was wasted worldwide, with 60% being from households.

Now, imagine if we could scan our groceries, receive recipe suggestions based on expiring products and health conditions, order missing products with a single click, and make AI plan meals in advance for us.

Wouldn't this be great?

This is Smart Kitchen.

Designed for households where busy professional, students to reduce food waste and eat healthier, tackling two major United Nations Sustainability Development Goals.

Currently, there are several options like NoWaste or KitchenPal, but they often only focus on some points. What really sets Smart Kitchen apart is the AI meal planner and the food order functionality, providing the user not just a tool, but a complete solution.

Smart Kitchen is a free to use, supported by ads, giving users core features without paywalls.

A premium subscription of 3.99 pounds per month unlocks the AI meal planner and household size customisation, giving the user personalised recommendation.

Additionally, a 4% commission is applied to grocery purchases made through the app, providing the user a seamless experience.

We expect to operate at an early-stage loss, with Initial costs expected to be around £20.000, but we are confident that with these functionalities, we can double the userbase every month, achieving a profit stage before the end of first year.

Smart Kitchen scalability potential is huge, with our priority in partnering with grocery shops to make product scanning easier, to create our grocery online shop, and to sell our ready-made meals through the app.

Thank you.

Any questions?
